## VIABLE IMPACTOR SYSTEM

**L**IGHTHOUSE designed the ActiveCountR system to meet the industry need for continuous trouble-free operation and flexible running parameters. The ActiveCountR utilizes an external vacuum source which can be an independent pump system, house vacuum or a shared vacuum source with non-viable particle counters.

The sampling head is designed to be remote mounted within the critical sampling environment. The sampling head comes in a bottom mount and side mount design. The remote sampling switch allows the operator to start, stop or pause sampling without having to intervene into the critical area being sampled. Sampling can also be controlled via software.
